

hello ada

AI-powered learning for the classroom of the future

or vibe learning for kids ;)

Problem

Schools are **falling behind in the AI era.**

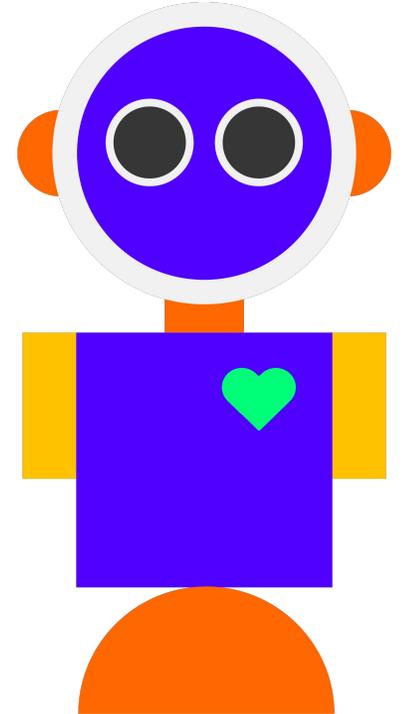

- Teachers aren't trained to teach AI (OECD, 2023)
- Coding platforms stop teaching before it gets interesting for kids
- Municipalities face mandates on digital literacy but no scalable tools.

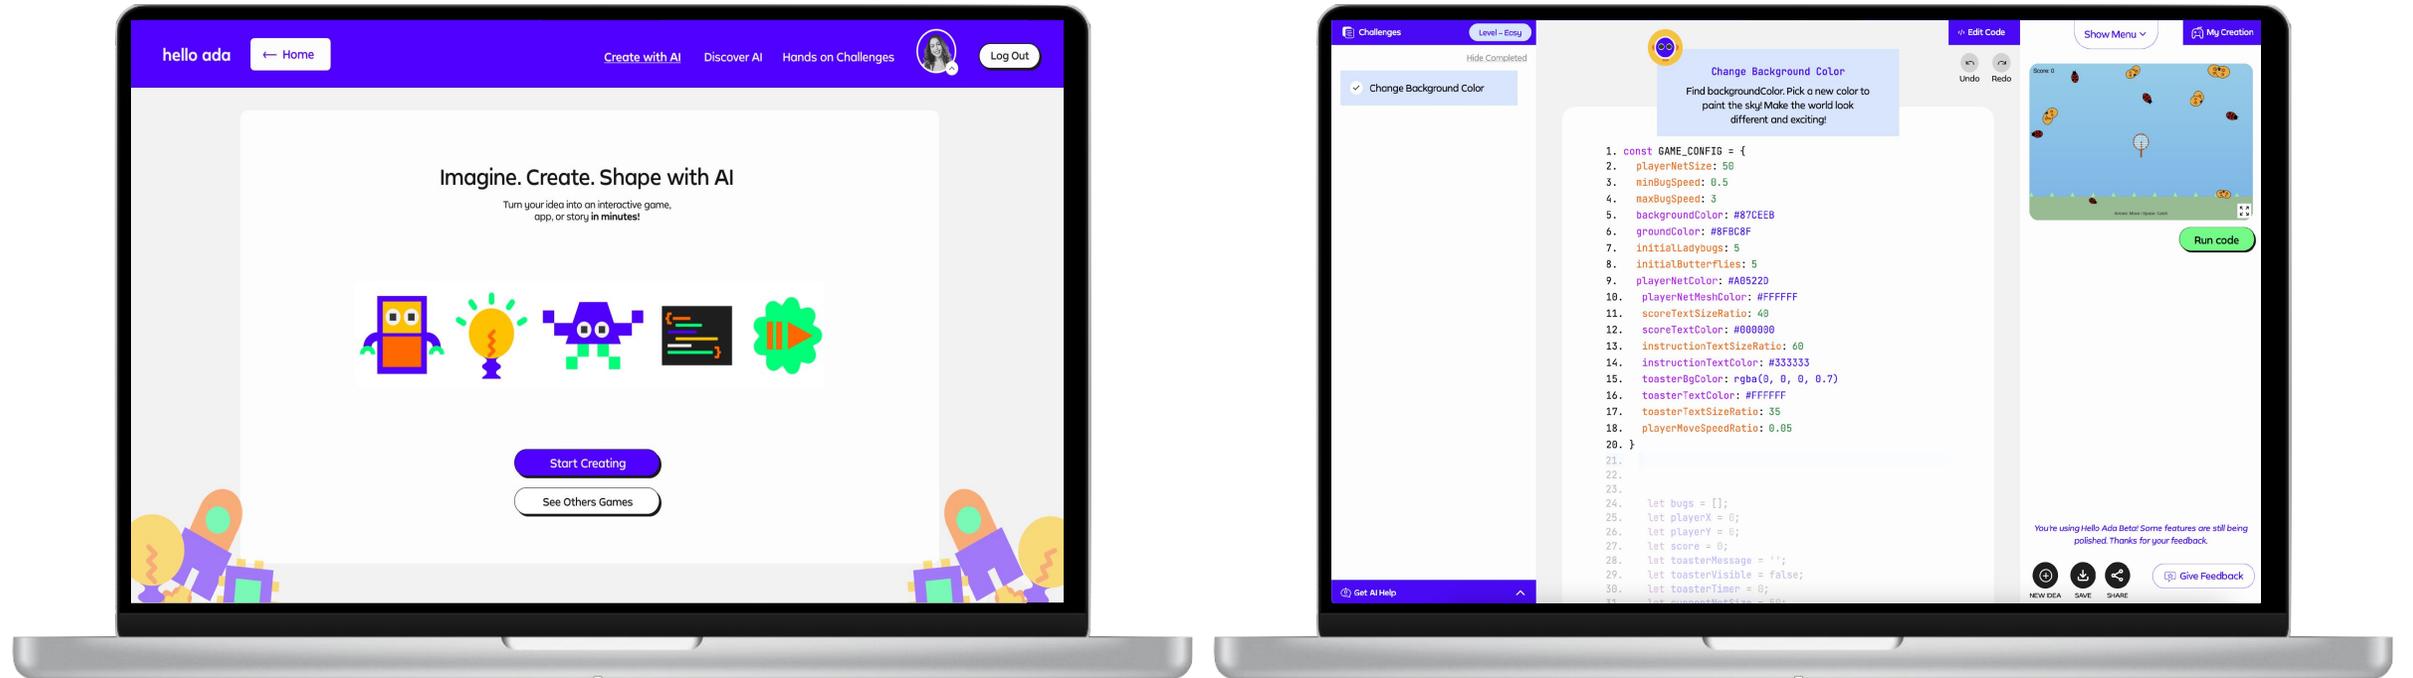

Our product

Hello Ada is the **first AI-native learning platform for schools.**

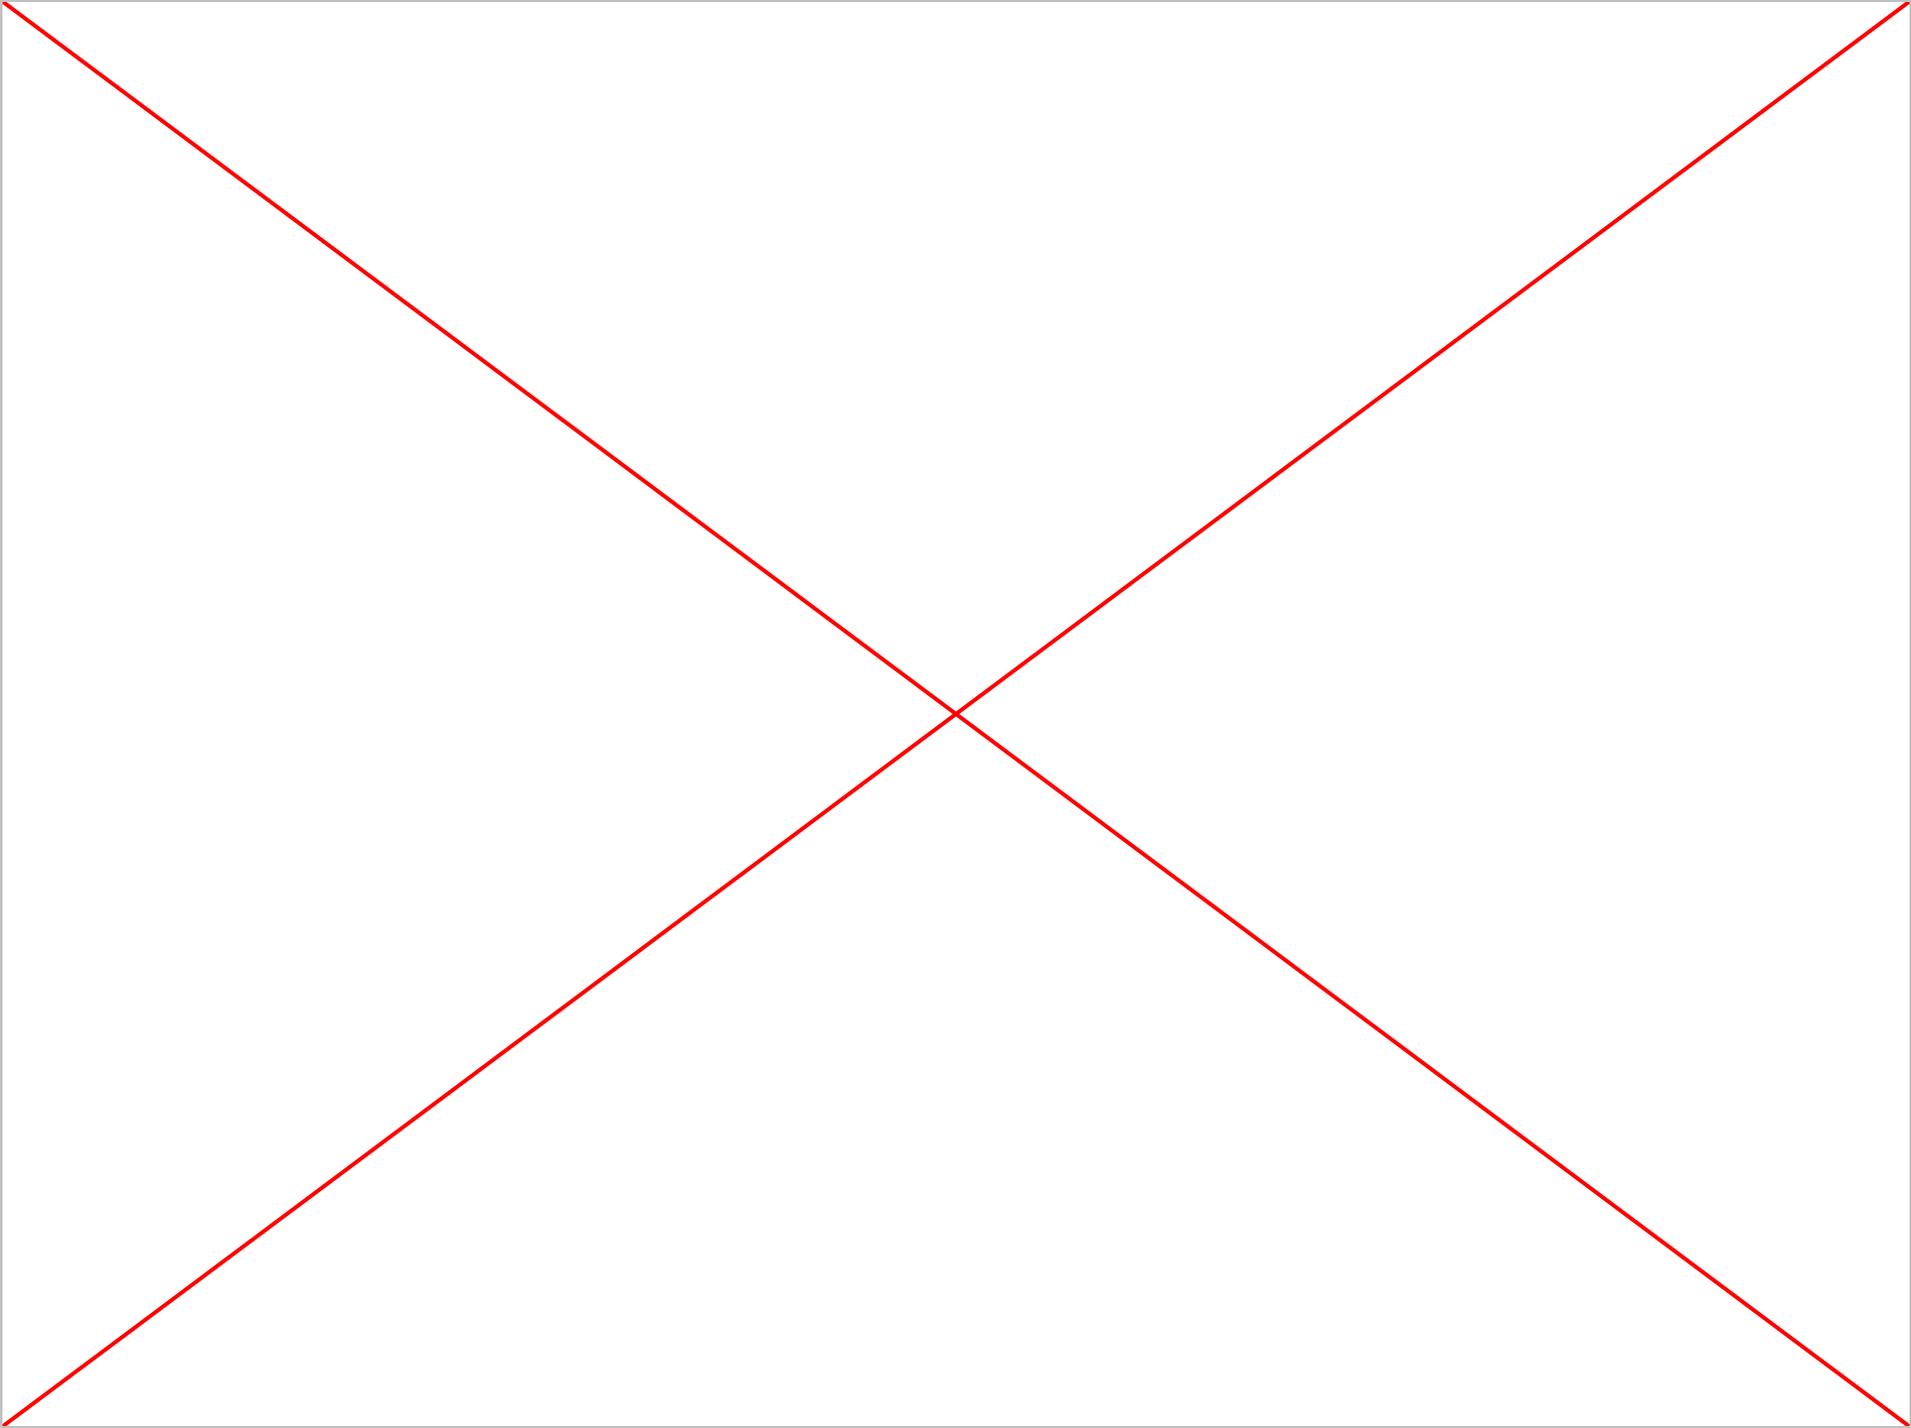

- Kids can build apps, games, and tools using AI as their creative co-pilot.
- Teachers get ready-made lesson plans and dashboards.
- Municipalities can easily enable schools to become AI-native.

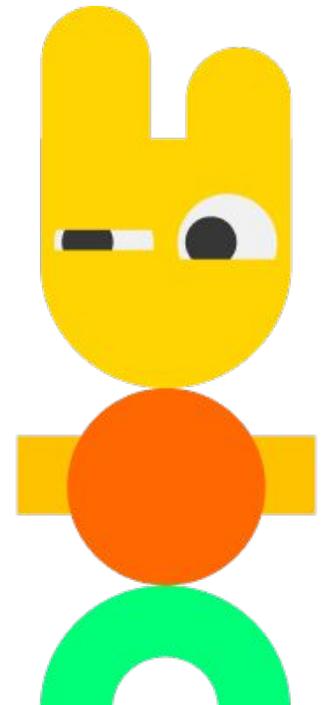

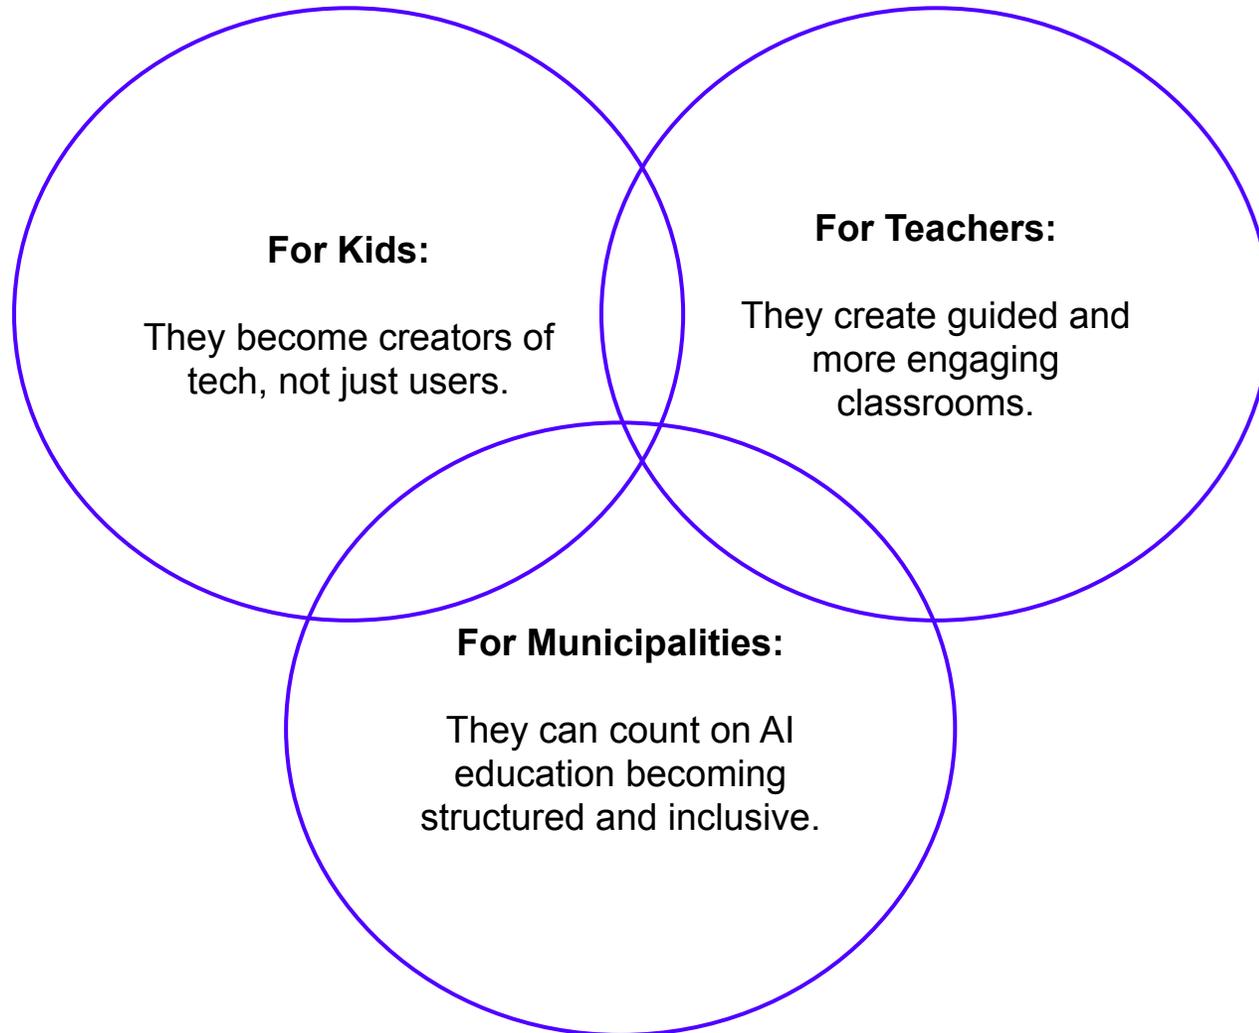

Product demo

Student describes an idea. Platform generates a project + real code view with guided AI “co-pilot” for students.

Insights

Impact

- **1,000+** kids creating
- **500+** games built on Hello Ada since beta launch
- **700+** coding challenges completed
- **2** school pilots

and with financial support from

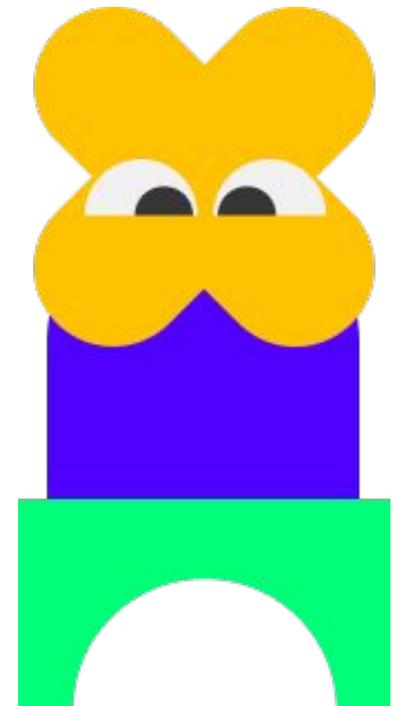

Microsoft

Google
